Histories of Peirene 05 2020 The Peirene Fountain as described by its first excavator, Rufus B. Richardson, is "the most famous fountain of Greece." Here is a retrospective of a wellspring of Western civilization, distinguished by its long history, site to a great ancient city, and early identification as the site where Pegasus landed and was tamed by the hero Bellerophon. Spent three millennia and touching a fourth, Peirene developed from a nameless spring to a renowned source of inspiration, from a landmark in Classical Corinth to a quiet churchyard and cemetery in the Byzantine era, and finally from free-flowing Ottoman fountains back to the streams of the source within a living ruin. These histories of Peirene as a spring and as a fountain, and watery imagery, form a rich cultural narrative whose interrelations and meanings are best appreciated when studied together. The author deftly describes the evolution of the Fountain of Peirene framed against the underlying landscape and its ancient, medieval, and modern settlement, viewed from the perspective of Corinthian culture and spheres of interaction. Foundations of an African Civilisation 29 2022 "Focuses on the Aksumite state of the first millennium AD in northern Ethiopia and southern Eritrea, its development, florescence and eventual transformation into the so-called medieval civilisation of Christian Ethiopia. This book seeks to apply a common methodology, utilising archaeology, art-history, written documents and oral tradition from a wide variety of sources; the result is a far greater emphasis on continuity than previous studies have revealed. It is a major re-interpretation of a key development in Ethiopia's past, while raising and discussing methodological issues of the relationship between archaeology and other historical disciplines; these issues, which have theoretical significance extending beyond Ethiopia, are discussed in full. The last millennium BC is seen as a time when northern Ethiopia and parts of Eritrea were

inhabited by farming peoples whose ancestry may be traced far back into the local 'Late Stone Age'. Colonisation from south Arabia, to which defining importance has been attached by earlier researchers, is now seen to have been brief in duration and small in scale, its effects largely restricted to élite sections of the community. Re-consideration of inscriptions shows the need to abandon the established belief in a single 'Pre-Aksumite' state. New evidence for the rise of Aksum during the last centuries is critically evaluated. Finally, new chronological precision is provided for the decline of Aksum and the transfer of centralised political authority to more southerly regions. A new study of the ancient churches - both built and rock-hewn - which survived this poorly-understood period emphasises once again a strong degree of continuity across periods that were previously regarded as distinct."--Publisher's website.

1177 B.C. Oct 20 2021 A bold reassessment of what caused the Late Bronze Age collapse In 1177 B.C., marauding groups known not only as the "Sea Peoples" invaded Egypt. The pharaoh's army and navy managed to defeat them, but the victory so weakened Egypt that it soon slid into decline, as did most of the surrounding civilizations. After centuries of brilliance, the civilized world of the Bronze Age came to an abrupt and cataclysmic end. Kingdoms fell like dominoes over the course of just a few decades. No more Minoans or Mycenaeans. No more Trojans, Hittites, or Babylonians. The thriving economy and cultures of the late second millennium B.C., which had stretched from Greece to Egypt and Mesopotamia, suddenly ceased to exist, along with writing systems, technology, and monumental architecture. But the Sea Peoples alone could not have caused such widespread breakdown. How did it happen? In this major new account of the causes of this "First Dark Ages," Eric Cline tells the gripping story of how the end was brought about by multiple interconnected failures, ranging from invasion and revolt to earthquakes, drought, and the cutting of international trade routes. Bringing to life the vibrant multicultural world of these great civilizations, he draws a sweeping panorama of the empires and globalized peoples of the Late Bronze Age and shows that it was their very interdependence that hastened their dramatic collapse and ushered in a dark age that lasted centuries. A compelling combination of narrative and the latest scholarship, 1177 B.C. sheds new light on the complex ties that gave rise to, and ultimately destroyed, the flourishing civilizations of the Late Bronze Age—and that set the stage for the emergence of classical Greece.

Drawdown Oct 08 2020 • New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world "At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope." —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming "There's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom." —David Roberts, Vox "This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook." —Peter Kareiva, Director of Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. A hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to embrace planetary crisis as an opportunity to create a just and livable world.

Foundations of Grace Nov 28 2019 Understanding the doctrines of grace provides a clearer picture of Gods sovereignty, mercy and majesty. From the lawgiver Moses to the Apostle John, and from the early church fathers to modern defenders of the faith there has marched onto the stage of human history a long line of godly men, a triumphant parade of spiritual stalwarts who upheld the doctrines of grace. In this book, Dr. Steven J. Lawson takes readers on a heart-stirring survey of the Scriptures and their teaching on Gods way of salvation. Lawson demonstrates that far from being a sixteenth century invention, the doctrines of grace are the clear teaching of the Bible in its entirety. From Genesis to Revelation, the Scriptures declare the message of Gods sovereign grace in salvation.

Armies of Ancient Italy 753-218 BC Jun 03 2020 Before becoming the masters of the Mediterranean world, the Romans had first conquer the Italian peninsula in a series of harsh conflicts against its other varied and warlike residents. The outcome was not foregone conclusion and it took the Romans half a millennium to secure the whole of Italy. Gabriele Esposito presents the armies that fought these wars, in which the Roman military spirit and their famous legions were forged. He not only follows the evolution of the Roman forces from the Regal Period to the outbreak of the Second Punic War but also the forces of their neighbors, and enemies. The most notable of these, the Etruscans, Samnites and the Italian Greeks are given particular attention but others such as the Celts and Ligures of the North and the warriors of Sicily and Sardinia, are also considered. Details of the organization, weapons, equipment and tactics of each army are described, while dozens of beautiful color photos of reenactors show how the warriors looked in the field.
