Innovative Bioceramics in Translational Medicine I Sep 05 2020 This book is part of a two-part

volume book that highlights the latest advances in innovative bioceramics applied in the highly interdisciplinary area referred to as “translational medicine”. This volume covers the basic principles and techniques used in the manufacture of bioceramics and biocomposites for various biomedical applications including drug delivery, implantable bionics and the development of the cardiac pacemaker, and bone tissue engineering. Furthermore, self-healing materials have been attracting increasing interest in both engineering and medical applications during the past two decades. Self-healing hydrogels are particularly interesting because of their ability to repair structural damages and recover their original functions, specifically in tissue engineering.

The Non-Linear Field Theories of Mechanics Jun 02 2020 This third edition includes the corrections made by the late C. Truesdell in his personal copy. It is annotated by S. Antman who describes the monograph's genesis and the impact it has made on the modern development of mechanics. Originally published as Volume III/3 of the famous Encyclopedia of Physics in 1965, this book describes and summarizes "everything that was both known and worth knowing in the field at the time." It also has greatly contributed to the unification and standardization of the concepts, terms and notations in the field.

Marine Proteins and Peptides Nov 07 2020 Food proteins and bioactive peptides play a vital role in the growth and development of the body's structural integrity and regulation, as well as having a variety of other functional properties. Land animal-derived food proteins such as collagen and gelatin carry risks of contamination (such as BSE). Marine-derived proteins, which can provide equivalents to collagen and gelatin without the associated risks, are becoming more popular among consumers because of their numerous health beneficial effects. Most marine-derived bioactive peptides are currently underutilized. While fish and shellfish are perhaps the most obvious sources of such proteins and peptides, there is also the potential for further development of proteins and peptides from sources like algae, sea cucumber and molluscs. Marine-derived proteins and peptides also have potential uses in novel products, with the possibility of wide commercialization in the food, beverage, pharmaceutical and cosmetic industries, as well as in other fields such as photography, textiles, leather, electronics, medicine and biotechnology. *Marine Proteins and Peptides: Biological Activities and Applications* presents an overview of the current status, future industrial perspectives and commercial trends of bioactive marine-derived proteins and peptides. Many of the industrial perspectives are drawn from the food industry, but the book also refers to the pharmaceutical and cosmetics industries. There have recently been significant advances in isolating

functional ingredients from marine bio-resources and seafood by-products for use in these industries, but little has been published, creating a knowledge gap, particularly with regard to the isolation and purification processes. This book is the first to fill that gap. *Marine Proteins and Peptides: Biological Activities and Applications* is a valuable resource for researchers in the marine biochemistry field as well as food industry managers interested in exploring novel techniques and knowledge on alternative food protein sources. It will become a standard reference book for researchers involved in developing marine bio-resources and seafood by-products for novel nutraceutical, cosmetics, and pharmaceutical applications. It will also appeal to managers and product developers in the food, pharmaceutical and cosmetics industries, particularly those looking to use marine-derived proteins and peptides as substitutes or replacements for unfashionable or outdated food components.

A Global Green New Deal Apr 24 2022 Meeting the short run challenges of reviving the worldwide economy need not mean sacrificing long run economic and environmental sustainability. A Global Green New Deal (GGND) is an economic policy strategy for ensuring a more economically and environmentally sustainable world economic recovery. Reviving growth and creating jobs should be essential objectives. But policies should also aim to reduce carbon dependency, protect ecosystems and water resources, and alleviate poverty. Otherwise, economic recovery today will do little to avoid future economic and environmental crises. Part One argues why a GGND strategy is essential to the sustainability of the global economy. Part Two provides an overview of the key national policies whilst Part Three focuses on the global actions necessary to allow national policies to work. Part Four summarizes the main recommendations for national and international action, and

discusses the wider implications for restructuring the world economy towards 'greener' development.

Japan's Economic Challenge Jun 14 2021 This book, first published in 1988, assembles a key pool of references in English to help study the 'Japanese economic challenge' of the 1980s. Collectively, these writings chronicle the historical, social and cultural background of Japan's spectacular industrial take-off. They describe, analyse and interpret the diverse manifestations of Japan's economic growth.

Lloyd's Register of Shipping 1942 Steamers Feb 20 2022 The Lloyd's Register of Shipping records the details of merchant vessels over 100 gross tonnes, which are self-propelled and sea-going, regardless of classification. Before the time, only those vessels classed by Lloyd's Register were listed. Vessels are listed alphabetically by their current name.

State-Owned Enterprises in the Global Economy Nov 19 2021 State-owned enterprises (SOEs) combine economic activities resulting from their position on the market with non-economic functions determined by the state owner. In many of the world's major economies, SOEs play an important role, and in some, such as China, India, Russia and Brazil, they are outright dominant. At the same time, the existence of SOEs is largely ignored by economic theory and the current figures on SOEs on a global scale available in the literature are questionable in terms of their methodological validity and thus they do not allow for a proper cross-country analysis. This book fills this research gap. It focuses on the scope and importance of SOEs in a broad group of the largest economies, primarily on a variety of quantitative estimates. It contains the results of an extensive and unique empirical study of 37 of the world's largest economies over the period from 2009 to 2018. The findings showed that the average share of SOEs - measured by operating revenues and total assets - in the group of

the largest 100 enterprises (Top 100) of a given country is nearly 30%, while in the Top 20 group it is even slightly higher. The authors present an econometric analysis showing the relationship between the scope of SOEs and the various economic and non-economic characteristics of the studied set of countries. The book also contains an in-depth discussion of selected key issues, such as the functions of SOEs in various types of economies, the role of SOEs in capital markets and the phenomenon of SOEs with foreign capital. This work is addressed to both academic economists, dealing with macroeconomics and economic policy, as well as researchers and analysts from various international organizations and think-tanks.
