Plant Physiology Jun 26 2019 This thoroughly revised and updated edition provides an accessible overview of the rapidly advancing field of plant physiology. Key topics covered include absorption of water, ascent of sap, transpiration, mineral nutrition, fat metabolism, enzymes and plant hormones. Separate chapters are included on photosynthesis, respiration and nitrogen metabolism, and emphasis is placed on their contribution to food security, climate resilient farming (or climate-smart agriculture) and sustainable development. There is also a chapter on the seminal contributions of plant physiologists. Supported by the inclusion of laboratory experimental exercises and solved numerical problems, the text emphasises the conceptual framework, for example, in coverage of topics such as thermodynamics, water potential gradients and energy transformation during metabolic processes, water use efficiency (WUE) and nitrogen use efficiency (NUE). Bringing together the theoretical and practical details, this text is accessible, self-contained and student-friendly.

[The Way of Things, Part Four, The Teacher](#) Nov 04 2022 In Part Four of The Way of Things, the spirits of wind and rivers contribute their own abilities to aid the mysterious and apparently ageless Athro who is to steer events to the time of choosing. It is an event looked forward to and yet feared by all of Alvalard. Athro's task is complicated by having to care for two headstrong youngsters who have a talent for getting themselves into trouble. Also making his first appearance in the series, is this staff-twirling Lemna Minor. Supposedly driven insane by carrying a prophecy in his head, one wonders if he is as mad as he appears. So the time of choice arrives. Good in the form of the Guardian or Evil in the shape of the Darkness. If Good is to win, then someone must pay the Ultimate Price.

[Creating resilient livelihoods for youth in small-scale food production](#) Nov 11 2020 This publication showcases initiatives that have been successfully implemented to help youth build resilience in the agrifood system, despite the severe consequences of climate change and formidable social and economic challenges. It aims to inspire potential policies and programmes by portraying key needs, challenges and initiatives, as well as lessons learned and opportunities for helping to improve the resilience of livelihoods for youth in small-scale food production. The aim is to draw recommendations from these initiatives, building on the Koronivia Joint work on Agriculture (KJWA) – a landmark decision under the United Nations Framework Convention on Climate Change (UNFCCC) that recognizes the unique potential of agriculture in tackling climate change.

Phytoremediation Jul 20 2021 Phytoremediation: Methods and Reviews presents the most innovative recent methodological developments in phytoremediation research, and outlines a variety of the contexts in which phytoremediation has begun to be applied. A significant portion of this volume is devoted to groundbreaking methods for the production of plants that are able to degrade, take up, or tolerate the effects of pollutants. Phytoremediation: Methods and Reviews adopts a multidisciplinary approach to the examination of principles and practices of phytoremediation, from molecular manipulation to field application. Parts I and II discuss detailed protocols for achieving several different goals of phytoremediation, including enhancing contaminant degradation, uptake, and tolerance by plants; exploiting plant diversity for phytoremediation; modifying contaminant availability; and experimentally analyzing phytoremediation potential. Parts III and IV examine a variety of progressive techniques for phytoremediation and explore their implementation and success on a global scale. This cutting-edge volume highlights the myriad of contexts in which phytoremediation can be applied, and energizes new research by describing ways in which barriers to success have been recently overcome.
